SPRING IS COMING, THE X-BOW WANTS TO GET OUT OF THE GARAGE: “PIMP YOUR RIDE“ – WITH THE NEW KTM POWER PARTS!

It was a long winter – and a hard time for all those KTM X-BOW owners, who could not get used to the Pirelli Sottozero winter tyres or even the snow chains offered in the accessory range. But now it's not much longer: The snow is melting and every day the temperatures drive the mercury in the thermometers a little bit further towards “springtime”.

The best omen for the X-BOW in its garage, raring to go. And for KTM the ideal point in time to supply the owners of this super sports car with the latest PowerParts! Because during the winter the lights rarely went out in KTM's halls, new PowerParts and the new PowerWear catalogue were tinkered with. The latter is now available in print or online on www.ktm-x-bow.com and gives a complete overview of all available tuning parts and the purpose-made X-BOW clothing range.

Georg Silbermayr, Sales-Manager of KTM's car division is thrilled about these many new possibilities to individualize the X-Bow, true to the motto: „pimp your ride“: „Our new PowerParts- and PowerWear range offers something for everyone! No matter if you are a pleasure-seeking motor tourist or a motivated trackday racer. The choice ranges from purpose-made bags up to a special racing suspension – and everything can be viewed and selected online or in the glossy catalogue in your own time.“

All KTM PowerParts may be ordered via the over 40 X-BOW service partners, which can be found on www.ktm-x-bow.com. They are the initial contact regarding orders or queries about the individual products, but for particularly tricky homologation problems or specific questions you may also contact Michael Wölfling, X-BOW Related Products-Manager, via e-mail (michael.woelfling@ktm.at) or by telephone (+43 7742 6000 6811) anytime.

During the cause of spring there will be one or two more surprises, Wölfling promises: “We are currently working on the homologation of further PowerParts, such as special, particularly light aluminium rims or aerodynamic parts, which will be available this year – we will inform our customers separately about this!”
